

The Translational Science of Rare Diseases: From Rare to Care III

Evangelische Akademie Tutzing,
Schlossstraße 2+4, 82327 Tutzing, Lake Starnberg, 11th – 13th April 2018

The international symposium “The Translational Science of Rare Diseases: From Rare to Care III”, hosted by the BMBF-funded German Research for Rare network, presents innovative research and its relevance for the development of new therapeutic strategies in rare diseases.

Now into its third cycle, the conference will again bring together internationally renowned scientists, physicians as well as the patient perspective to discuss cutting edge knowledge and its implementation in patient care. This will also be a key opportunity to strengthen cross-border research collaboration.

An additional main focus will be the fostering of collaboration between basic research and pharma to encourage industry to invest in less-popular fields of medical research.

Abstracts from all rare-disease-related areas are invited. Young physicians/scientists are encouraged to submit their work. The best abstracts will be rewarded with travel grants by the care-for-rare foundation.
